. ToutclainlyMoultFum [url= manager . Search About Us Trinity Health of Colorado is an organization of healthcare professionals committed to providing care to those in need. We are guided by our core values of Caring, Compassion and Commitment. To learn more about Trinity Health of Colorado, please visit our website: [www.trinityhealth.org](http://www.trinityhealth.org) Mission Statement Our mission is to provide comprehensive and compassionate care to all patients. Our Values Values are the basis of our conduct. They represent the bedrock of our organization and guide us in all that we do. Our values are:[Genetic diagnostics of p53 gene mutations in patients with non-Hodgkin's lymphoma]. Analysis of the p53 gene was carried out in 40 patients with lymphoproliferative disorders to determine whether the gene alterations are common or rare in them. Thirty-three patients had non-Hodgkin's lymphomas (NHL) and seven had lymphoid hemopathies. The patients with NHL were divided into three groups: low malignancy lymphoma (n = 12), high-grade malignant NHL (n = 15), and intermediate-grade malignant NHL (n = 6). Nine patients with NHL had received chemo- and radiotherapy. The control group consisted of 10 healthy persons. Exons 4-8 were studied by PCR and single-strand conformation polymorphism (SSCP) analysis. Abnormalities of the p53 gene were found in 21 out of 40 patients with NHL (52.5%). Eighteen patients were heterozygous for a germ-line mutation of the p53 gene: five for a G to A transversion at nucleotide 193 of codon 72 (the Arg-72 mutation), five for a G to T transversion at nucleotide 245 (the Arg-245 mutation), and eight for a G to A transition at nucleotide 182 of codon 72 (the Arg-72 mutation). In the majority of cases, the Arg-72 mutation was associated with the Arg-245 mutation. In two cases of NHL, p53 gene analysis was not informative. The Arg-72 mutation was found in one patient with low-grade NHL and in two patients with high-grade NHL. The Arg-245 mutation was found in two patients with low-grade NHL and in two patients with intermediate-grade NHL. One heterozygous patient with NHL was found 2d92ce491b
