Run the "Universal BIOS Backup ToolKit" and save (click on the. The latest Dell bios (Dell download site) for my computer is 1.0.13 \hat{A} . Technique for prevention of hepatic venous outflow obstruction in living-related liver transplantation. To develop a technique for prevention of hepatic venous outflow obstruction in living-related liver transplantation, an inflow-outflow anastomosis (IAO) and reversed Y (RY) of recipient porta hepatis were performed at the inferior border of inferior vena cava. The atrial septal defect was anastomosed with a patch of donor pericardium. Twenty-two patients underwent living-related liver transplantation with the IAO technique. They were divided into two groups (group IAO or group RY). Group IAO was composed of patients who had the IAO, and group RY included patients who had the RY. Portal venography, CT, MRI, and/or angiography were performed to assess hepatic venous outflow obstruction in this study. The study enrolled 10 patients in each group. There were no significant differences in graft loss rate ($p = 0.26$), cold ischemic time (cold ischemic time, 225.9 +/- 25.7 minutes in group IAO vs. 168.9 +/- 8.4 minutes in group RY; $p = 0.0009$), warm ischemic time (warm ischemic time, 66.1 +/- 19.6 minutes in group IAO vs. 50.6 +/- 10.8 minutes in group RY; $p = 0.09$), and postoperative hospitalization (postoperative hospitalization, 9.8 +/- 4.0 days in group IAO vs. 8.2 +/- 3.5 days in group RY; $p = 0.35$). In posttransplantation ultrasonographic and hepatobiliary scintigraphy, there were no significant differences in the incidence of hepatic venous outflow obstruction ($p = 0.16$ and $p = 0.22$), respectively. The IAO technique was found to be useful for preventing hepatic venous outflow obstruction

If you're a PC/Windows user, then you know how difficult it can be when you need to reinstall Windows. Trying to save your files and documents before you do can make a reinstall of Windows even more time-consuming. If you know you need to reinstall Windows, you'll want to save your Windows installation. Before you do, I recommend that you download and install the Free version of Ultimate Boot CD. We are going to use this program to restore the original bootlooder on the drive, so we can restore Windows without having to burn an installation disc. If you're in the habit of backing up your operating system's files and documents before you reinstall Windows, you'll need to install the free Universal Backup. 1) Use the Ultimate Boot CD to restore the bootlooder on your hard drive. This will restore the bootlooder, which is critical, and should allow Windows to start without crashing. 2) Install the Universal Backup program. The free version Universal Backup 2 is recommended. 3) Download WinRAR. 4) Extract the Universal Backup files from the downloaded WinRAR archive. Windows users will need to download WinRAR from: You'll find download instructions on the WinRAR Web site. 5) Use the Universal Backup tool to restore the BIOS. Use a flash drive to download the BIOS file to your desktop. 6) Backup your files before you reinstall Windows. I like to work on my files and documents on my desktop. One great way to back up files, documents, and settings is by using a program called Super Backup. This program has a free and paid version. I will use the paid version, which has many more features. Super Backup's feature set: * Easy-to-use interface. * Multiple-way backup. * Batch backup. * Snapshot backup. * Backup and restore. * Edit files. * Split files. * Create disk image and backup disk. * Password protection. * Command-line options. * Private key. * Encryption. * Batch backup to multiple hard drives. The free version is really good, too, so you might want to give it a try. 7) Install Windows. 8) Restore bootlooder. If you're new to installing Windows 7 or 8 from an installation disk, then there
